

| Use case "Create Account" |          |   |
|---------------------------|----------|---|
| Main flow of event        |          |   |
| No                        | Doer     | Action  |
| 1                         | User     | Request to create account   |
| 2                         | Software | Lead user to sign up page, where user needs to provide account information            |
| 3                         | User     | Provide basic info like email/phone number, password, first name, last name, birthday |
| 4                         | Software | Call the use case "Validate Information"  |
| 5                         | Software | Call the use case "Set up access permission"  |
| 6                         | Software | Call the use case "Set up payment method"   |
| 7                         | Software | Display the account created successfully message                                      |

| Use case "Validate Information" |          |   |
|---------------------------------|----------|---|
| Main flow of event              |          |   |
| No                              | Doer     | Action  |
| 1                               | Software | Ask the user to re-input the password to validate   |
| 2                               | User     | Re-input the password   |
| 3                               | Software | Check if the re-inputted password is the same as the first password user has provided, if yes then end the use case |

| Alternative flow of event |  |  |                 |
|---------------------------|--|--|-----------------|
| Location                  | Condition  | Action   | Resume Location |
| #3                        | The re-inputted password is not the same with the first password | Software displays that user fails to validate password and ask the user to re-validate | Back to step 2  |

| Use case "Set Up Access Permission" |          |   |
|-------------------------------------|----------|---|
| Main flow of event                  |          |   |
| No                                  | Doer     | Action  |
| 1                                   | Software | A dialog with tickbox tells the user that the app will use his/her current location when running. |
| 2                                   | User     | Check the tickbox   |

| Use case "Set Up Payment Method" |          |   |
|----------------------------------|----------|---|
| Main flow of event               |          |   |
| No                               | Doer     | Action  |
| 1                                | Software | Display a list of payment methods (by linking to interbank or e - wallet, ...), each with a tickbox |
| 2                                | User     | The users must choose at least one payment method by checking at least one tickbox                  |

| Alternative flow of event |   |   |                  |
|---------------------------|---|---|------------------|
| Location                  | Condition                                     | Action  | Resume Location  |
| #2                        | The user chooses the interbank payment method | The interbank is notified that user's credit card can be used for in-app purchase | End the use case |
